1. Introduction:

1.1 Scope of the Document

- This section will cover details regarding scope of the document
- Low level design document will be at component level i.e., for website portal there will be one LLD

1.2 Intended Audience

- This section will cover categories of audiences who will be referring/reviewing this document

1.3 System Overview

- This section will capture overview of system application i.e for what system is being developed
- Who are the stake holders of system?
- What are other external Systems through which this will be interacting

2. Project Briefing:

In proposed system, I present a website portfolio that will help you stand out from the crowd, show your uniqueness, build trust, and make sure that others can actually find you. While it is a word which was once only used for artists, a portfolio in the modern work sense refers to any body of creative work you use to show potential clients what you can do. A graphic designer, photographer, or artist might use a portfolio, but so do writers and other content creators, web developers, app developers, and even people like piercers and tattoo artists. It often stands in place of a traditional CV, although it can also be used to augment one. A portfolio website, obviously, is what happens when you take that body of work into online spaces. Instead of building a 'standard' website, most of which are single-page scrollers, you need to consider how best to show off your work through a digital medium.

It only takes a few seconds to lose a visitor's attention, so to be sure to use these seconds smart. Your potential clients will see the visuals first and if they like what they see, they will continue looking for more details. In other words, you need an awesome and appealing presentation of your works.

3. Problem Statement:

To create the portfolio website using HTML, CSS & JS.

4. Problem Solution:

Develop the website which is portfolio of a particular person doing some job.

5. Objective of the Project:

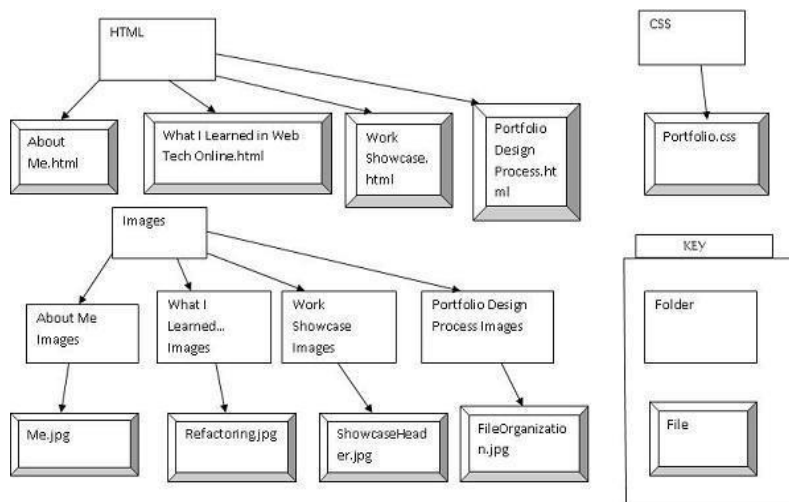

Objective of this project is to display compelling content and to provide basic information in a way that leads to getting more clients. A portfolio website is a unique way to showcase your work and let others know about yourself. It's like an evergreen platform for your projects, case studies, and information about you.

6. Scope of Project:

Monitoring the performance of portfolio by incorporating the latest market conditions. Identification of the investor's objective, constraints and preferences. Making an evaluation of portfolio income (comparison with targets and achievement). Making revision in the portfolio.

It will be very helpful for the banks because at the time of credit card fraud, the FDS confirms the translation to be of fraud, it raises an alarm, and the issuing bank declines the transaction.

7. Block Diagram:

8. Requirements Gathering:

- Window 10 Operating system
- Visual studio software.
- Few Github Non copyrighted source codes

9. Analysis:

You need a portfolio website to showcase your work. Whether you're an individual, a small team of two or a company of ten people, it's crucial that you have a unique online approach. A website portfolio will help you stand out from the crowd, show your uniqueness, build trust, and make sure that others can actually find you.

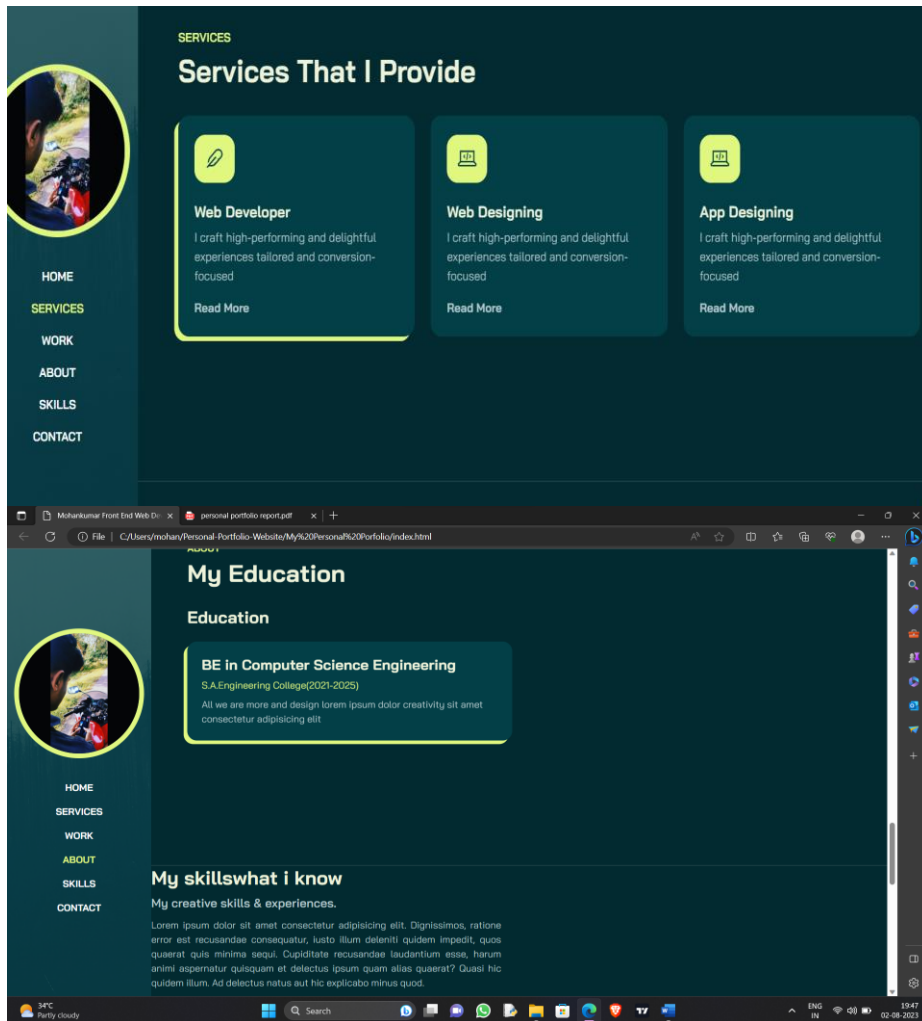

There are certain areas where a website portfolio is more important than others. If you find yourself in one of the following, it's safe to assume that you need a portfolio like a book needs words:

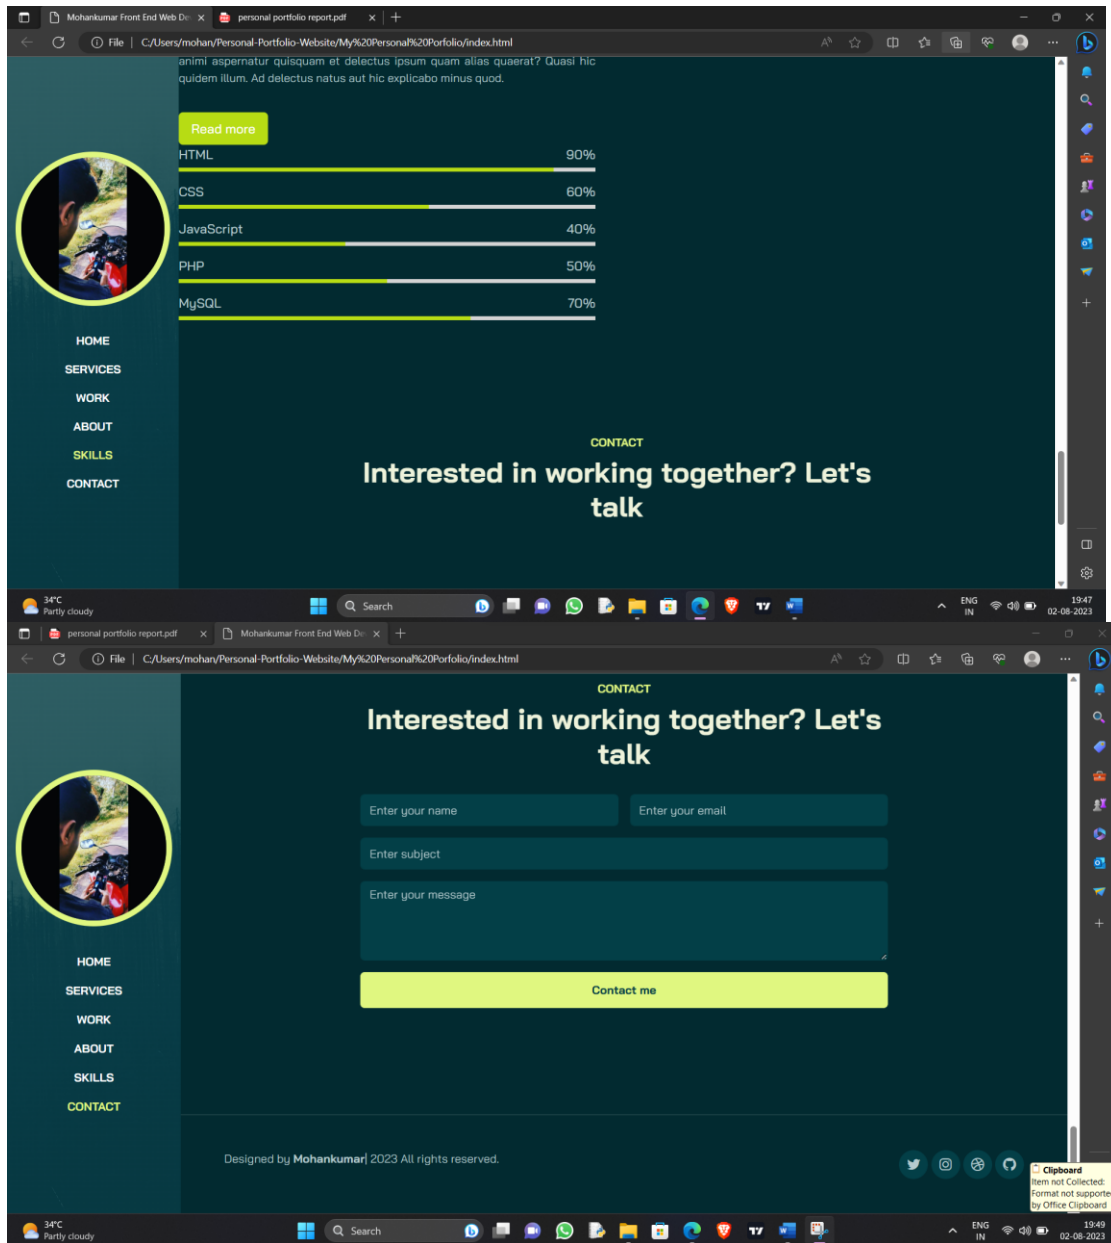

- Web design
- Web development (outsourcing, online shop)
- Graphic design (logo design, corporate ID, flyers, catalogs, packaging)
- Marketing (digital marketing, print design, SEO, PPC advertising)
- Art design (illustration, video, audio, photography)

But it doesn't stop just there, the same goes with interior designers, artists, models, writers, etc. The main idea is that you are a creator and you need to showcase your work. Portfolio website lets you do that in high quality.
